PORTFOLIO MANAGER COMMENTARY - SEPTEMBER 30, 2021

Global Markets Review

Following a stormy month in September, global equity markets narrowly extended positive gains during the quarter. For the three-month period ending September 30, 2021, the MSCI World Index edged up 0.1%, led by the Financials sector, which gained 2.2%; Energy was the second-best performing sector, rising 1.6% during the quarter and boosted by robust oil and gas prices. In North America, the S&P 500 was up 0.6%, also driven by Financials, while the S&P/TSX Composite was up 0.2%, with Consumer Staples and Industrials as the top performing sectors. In Europe, the STOXX 600 rose 1.0% during the quarter. Italy and the U.K. were the best-performing countries, where the FTSE MIB was up 3.0% and the FTSE 100 was up 1.9%. CAC 40 and IBEX 35 ticked up 0.4% and 0.3%, respectively. Switzerland and Germany finished the period in negative territory, down 2.4% and 1.7%, respectively.

Global economies continued the path to recovery through the third quarter, while sentiment on the growth deceleration has weighed on the market. U.S. manufacturing PMI came in at 61.1 for September, the strongest reading during the quarter, while the unemployment rate also saw sequential improvement. Nonetheless, inflationary pressures remained elevated, with August core CPI at 4%, despite dropping from the June high (4.5%). Global yields spiked after bottoming in August. The U.S. 10-year Treasury yield peaked above 1.5% after a mildly hawkish Federal Open Market Committee (FOMC) meeting. The U.K. 10-year Gilts also mirrored its U.S. peer, touching 1% for the first time since May 2019. These triggered market selloffs of high-growth names especially among Information Technology and Healthcare sectors in the back half of September, while value stocks in Financials and Energy sector were buoyed on the back of rising yields. Although growth still outperformed value during the quarter, the gap has narrowed since mid-September, which coincides with rising yields. At the same time, uncertainties around China's slowing economic momentum and contagion risks due to the property developer Evergrande's debt crisis also sent market volatility higher in September.

There were few major monetary policy changes among global central banks in developed economies during the quarter, with inflationary pressures becoming the key variable for the pace of policy shifts. The Federal Reserve left the policy rate unchanged at 0%-0.25% at the September FOMC meeting, while acknowledging that "a moderation in the pace of asset purchases may soon be warranted". The latest median dot plot projects the fed funds rate at 1% by the end of 2023 and 1.75% by the end of 2024. Moreover, the 2021 inflation outlook was substantially lifted again to 4.2%, 80 bps above the June estimate, reflecting stickier inflation than had previously been expected. Real GDP forecast for the year was also revised down to 5.9% from 7%, implying headwinds in the near-term economic growth outlook.

In Canada, the Bank of Canada (BoC) kept all policy variables unchanged in the September statement, including the overnight policy rate at 0.25% and government bond purchases at C$2 billion per week. On inflation, the central bank still saw the current spike as transitory, highlighting that wage increases have been moderate and medium-term inflation expectations are well anchored. BoC Governor Tiff Macklem also released a roadmap to exit monetary stimulus, outlining that once the new stimulus is removed the first step would be to move to the reinvestment phase of the QE program (most likely cutting bond purchases from C$2 billion per week to C$1 billion). He also reiterated that the reinvestment would be maintained well past the initial rate hikes.

The European Central Bank (ECB) kept the benchmark interest rate unchanged at -0.50%. President Christine Lagarde repeated in September that the upswing in inflation was temporary, and that base effect and rising energy prices would not result in lasting inflation. The Governing Council decided to moderately lower the pace of purchases under the pandemic emergency purchase program (PEPP) from that of the past two quarters, with an unchanged envelope of EUR1.85 trillion through the end of March 2022 at the least. Purchases under the asset purchase program (APP) will progress at a monthly pace of EUR20 billion. The ECB raised their projections on 2021 annual real GDP growth for the euro area to 5% from 4.6% in the June assessment and annual inflation rate to 2.2% from 1.9% in June. Despite the bullish tone on the economic rebound, it is still too early to call for an end of the PPEP, as the decision will still depend on upcoming economic data before the December meeting. The Bank of England (BoE) voted in September to keep the policy rate unchanged at 0.1% and maintain the asset purchase target of £875 billion, while revising down the Q3 GDP forecast to 2.1% from 2.9%. BoE also reiterated that it expected CPI inflation to rise slightly above 4% this year, double its target, largely on the back of upside risks posed by hefty energy and goods prices. On the political front, Olaf Scholz of the Social Democrats narrowly led Chancellor Angela Merkel's Conservatives in the German election. This narrow victory suggests that long negotiations lie ahead before a coalition government can emerge, which could raise extended period of market and policy uncertainties.

According to the statistics compiled by the World Health Organization, the number of confirmed infections worldwide exceeded 233 million by the end of September, while the weekly cases have continued to drop after peaking in August. On the other hand, global vaccination efforts are well underway, with 70% of the population fully vaccinated in Canada and 56% in the U.S. However, due to fears of vaccine effectiveness against the Delta variant and delay of the vaccine rollout for ages 5-11 in the U.S., the pace of reopening was slower than previously anticipated during the third quarter. Fiscal support in Q3 was a mixed bag. The American Rescue Plan, along with other assistances such as Child Tax Credit, continued enhancing household savings, which were channeled into consumer spending amid reopening. Furthermore, the U.S. Senate passed a $1.2 trillion infrastructure package in August, with the House vote delayed to the end of October. However, as many fiscal stimuli are fading, the fiscal impulse on growth could turn negative next year according to Goldman Sachs.

Looking ahead to the rest of 2021, sector rotations into value and cyclical could persist if the yield curve finds its support and ticks up. However, volatility would potentially linger into the fourth quarter given rising inflation expectations and contracting monetary gauges, as well as global supply chain issues and China's growth deceleration. Market leaderships would be rotating among value/growth and cyclical/defensive alternatively within short timeframes. In this regard, the barbell approach to our portfolios is still the preferred strategy, supplemented by opportunities in the covered call writing amid high volatility risk in the near term. We expect to have clearer visibility after upcoming waves of corporate earnings for Q3 and key economic releases. At the same time, widening vaccine coverage, resilient fiscal support, and abundant household savings should keep fueling economic growth.

Portfolio Review:

Sustainable Power & Infrastructure Split Corp. (the "Fund") was launched on May 21, 2021. The Fund's class A shares provides monthly distributions and the opportunity for capital gains through an investment in an actively managed portfolio of primarily dividend-paying global power and infrastructure companies. The Fund holds a portfolio of 29 holdings across 6 sectors as of September 30th and has been structured around 4 key investment themes: Renewable Power, Green Transportation, Energy Efficiency, and Communications. Units (1 Class A share plus 1 Preferred share) of Sustainable Power & Infrastructure Split Corp. were down 1.1% for the third quarter of 2021.

The Fund was positively impacted by stock selections in Real Estate and Industrials. During the third quarter, growth-oriented REITs posted particularly strong returns before selling off together with the market in the month of September. We have a favorable outlook for Tower REITs heading into the fourth quarter, especially given the expectation of the Federal Reserve tapering in late 2021. We believe the current setup warrants a barbell approach with a tilt towards growth-oriented names. Within Industrials, we favor names that are tethered to the industrial automation, building modification and transportation theme. Increased regulator focus on infrastructure spending and green house gas reduction will translate into capital expenditure growth and revenue growth opportunities for many of our industrial holdings in the long run.

Gains were partially offset by lagging performance from the Consumer Discretionary sector. Auto players saw weak returns due to production disruptions caused by supply chain issues. We believe supply chain challenges will take multiple quarters to resolve, leading us to trim the Fund's allocations to auto related players during the quarter. We continue to monitor the sector closely for changes in our thesis.

During the third quarter, we have increased the Fund's allocation to Industrials and trimmed its exposure to Consumer Discretionary to better align the Fund with our cautiously optimistic outlook for Q4 2021. We believe the early cycle, cyclical-driven phase of the equity rally has already taken its course. High quality and growth names should outperform during the next quarter; especially given the uncertainty related to the timing of the Federal Reserve tapering, the potential structural nature of high inflation, and the outlook for COVID-19.
